Steel project awards environmental contract

Boulder Steel Ltd is pleased to announce that CQ Consulting Group has been awarded a contract for specialist environmental services as detailed planning work continues for the proposed \$1.4 billion Gladstone Steel Plant Project.

With offices in Rockhampton and Gladstone, CQ Consulting Group specialises in preparing environmental impact statements and associated studies and submissions.

The contract will include the preparation of the Material Change of Use (MCU) Submission for the Private Haul Road from Fisherman's Landing to Boulder's steel plant site, and furthermore the MCU application for the nearby rail siding, coal dump station and conveyor system.

General Manager Carl Moser said the project team was pleased to see such an important contract awarded to a company in Central Queensland and it reflected Boulder's commitment to use local suppliers as much as possible.

"The team at CQ Consulting Group, led by director Patrice Brown, has a wealth of local knowledge and expertise, and are perfectly positioned to provide the services required."

CQ Consulting is due to commence field work in relation to the MCU on the Private Haul Road on 19 January subject to weather.

Mr Moser anticipated Boulder's technical team would continue to expand over coming months with further contracts to be let for a range of services.
